A reciprocating pump is a class of positive-displacement pumps that includes the piston pump, plunger pump, and diaphragm pump. Well maintained, reciprocating pumps can last for decades. Unmaintained, however, they can succumb to wear and tear. It is often used where a relatively small quantity of liquid is to be handled and where delivery pressure is quite large.

[APF and Handbook 25th Edition - Australian Pharmacist](#)

In previous chapters we assumed that the gas expansion is isentropic and therefore we used T_4 as the outlet temperature of the gas. These assumptions are only applicable with ideal cycles. Most steady-flow devices (turbines, compressors, nozzles) operate under adiabatic conditions, but they are not truly isentropic but are rather idealized as isentropic for calculation purposes.
